

Gordon Foster's 2015 Christmas Message

On behalf of your employees and directors of Steuben Rural Electric Cooperative, I would like to take this opportunity to wish the membership a very Merry Christmas. The last few years I have used this message to communicate with the membership regarding any pressing current issues. This year I would like to present a portion of the report from the Board and management that was presented at the annual meeting in October.

To start, I would like to briefly mention the new REV (Renewing the Energy Vision) initiative proposed by the Governor. The REV is a road map for the next generation energy system which is supposed to provide New Yorkers with an energy system that is resilient, affordable and clean. There is still some uncertainty as to where the cooperatives will fall in this new initiative. However, there will be costs associated with it; to what extent is unknown to date.

Some projects associated with the REV are energy efficiency programs, community solar projects, rate making (changes/procedures), demand response programs and becoming distribution platforms to name a few. One good thing to mention is that the cooperative is already ahead of the game in that we have already committed to some of the REV's goals such as energy efficiency programs and energy demand side management, a renewable project, automated meter reading, all done as savings mechanisms for our members.

Interesting times and changes are coming our way. With that being said and with increased interest in renewable energy projects nationwide, the Board is continuously looking at renewable energy projects throughout the industry and the benefits that could be gained.

One such renewable energy project the cooperative entered into is the landfill gas project with Steuben County in 2010. Although the first few years were unstable, in 2013 the project realized its first profit of

\$250,000. 2014 was a profitable year for the County and the cooperative with the cooperative sharing \$370,000 equally with the County. These revenues, along with reductions in spending have helped the cooperative cover increasing delivery and plant costs without raising rates to the membership which is always our goal. 2015 has once again become a challenge for the project, although it is currently holding its own. It is, however, expected to realize little to no profit in 2015. This is due in large part to the decrease in energy sale prices and the decreased methane production at the landfill.

A contract for the sale of renewable energy credits (RECs) generated in 2016 has been obtained and will result in the sale of 15,000 renewable energy credits to New Hampshire. With this contract, the project will be close to a break-even point in 2016. Energy sales from the plant will also be a major contributor to the bottom line and are extremely difficult to predict on a daily basis.

The financial condition of the cooperative remains sound, even with the challenges presented with increased power bills, line materials, labor, operations costs, and the landfill gas project.

On another note, several members have expressed interest in or have already installed solar panels on their homes. With increased interest and installation of these systems, the Board adopted a policy regarding member distributed generation and approved an avoided cost for member generation. The adoption of this policy will prevent member subsidization while helping any member concerned about their carbon footprint sell any excess generation tied to their solar installation.

Adoption of this policy goes hand in hand with the Board's goal to provide low cost, reliable electricity to its members and not discourage member renewables. This policy gives the member the same price for excess generation (generation put back on the system) that it would cost to buy from our supplier (New York Power Authority), giving the member money for excess generation without costing the other members

more for buying it.

Over the next few months there will be several construction projects taking place on our system. The tie line between Marshall Warriner and Quarry substations has been approved and construction will begin in the near future. Completion of this tie line will provide reliability to the members.

The Board approved a program that will result in each and every pole on the system being tested over the next few years. The testing is done using special equipment and will provide a gauge as to when it will most likely be necessary to replace poles. In addition to a replacement schedule, the entire system will be inventoried and entered into our GIS mapping program. Using GIS mapping it will provide cooperative personnel up-to-date information of the location of all equipment and assist in locating problem areas and outages which will reduce costs due to efficiencies. Pole testing is also a requirement of Rural Utilities Service (RUS), our primary lending institution which is part of the USDA.

A broadband internet survey was provided to each of you earlier this year (in the newsletter and on the web site). The results were tabulated with less than 3% of the membership submitting a response. Although there was some interest in broadband internet, for the cooperative to enter into a program like this, it is estimated the cost would be approximately between \$20,000 and \$30,000 per mile; a cost the Board has determined would not be beneficial to the members at this time. We are, however, continuing to monitor programs and grants that may become available.

In closing, I would like to thank the employees for another year of dedicated service to the Cooperative and thank you, the members, for your continued support and wish everyone a Happy New Year.

On October 10, 2015, Steuben Rural Electric Cooperative, Inc. held its 71st Annual Membership Meeting at the Canisteo Greenwood High School in Canisteo, New York.

Members enjoyed the Stearns Poultry Farm chicken barbeque and door prizes together with early morning donuts, coffee, cheese and milk punch.

Day care was provided free of charge to members attending the meeting. The children painted pumpkins, and played an assortment of games. Each child went home with a Halloween goody bag.

Once again this year volunteers assisted our employees at the meeting. Other guests present were: Mike Palmesano, Assemblyman Nojay's Community Liaison; Jerry McLoughlin, New York Power Authority; Jim Meiers, CFC Regional Vice-President; Mark Schneider, CEO, Delaware County Electric Cooperative, Inc.; Edward "Rusty" Pick, Director, Delaware County Electric Cooperative, Inc.; Keith Pitman, General Manager, Oneida-Madison Electric Cooperative; Greg

Moon, Director, Oneida-Madison Electric Cooperative; Bill Moss, former Steuben Rural Electric Cooperative Director; Dick Moyle, former Steuben Rural Electric Cooperative General Manager; Dan Saulsgiver, Director, Oneida-Madison Electric Cooperative; and Alison Hunt, District Director for Congressman Tom Reed.

Cooperative members listened to the board report that provided an update the Governor's REV (Reforming the Energy Vision) initiative; the Board's awareness of future installation of solar projects and broadband internet access; an update on the financial status of the landfill gas project and Cooperative; pole testing program and new construction projects slated for 2016.

The following directors and employees received service awards James McCormick, Treasurer/Director 35 year pin; Joseph Hauryski, Secretary/Director 10 year pin; Gary Brockway, Director 5 year pin; Ernie Lang, Crew Chief 30 year pin; John Ellis, Mechanic 30 year pin; Joshua Gauss, Operations Manager 15 year pin; Mike

Green, Lineman 15 year pin; Betty Hall, Payroll/IT/Benefits Specialist 15 year pin; and Kristen Cleveland, Member Services Representative 5 year pin.

The following were elected to three-year terms on the Board of Directors: Jennifer Thurber, District 5 Canisteo, Jasper, Troupsburg, Woodhull; Robert Nichols, District 7 Addison, Erwin, Corning, Tuscarora, Lindley; Lawrence Ellis, District 8 Cattaraugus County.

Terri Stewart from Cameron was the winner of the raffle for an electrical appliance valued at \$400 from Sears.

Two hundred sixty-four members from the eastern district and twenty-seven members from the western district registered at the Annual Meeting. There were two proxies submitted.

We urge you to mark your calendar for October 8, 2016. Attend next year's Annual Meeting, exercise your right to vote, let us know your thoughts and concerns, enjoy the chicken barbeque and spend time with fellow members, directors, staff and employees.

Meter Removal

You want to remove your electric meter. You have a minor fix to do on your service wire in the circuit breaker panel and want to kill the power first. Stop! Under no circumstances is a member or a qualified electrician authorized to cut our seal and pull the meter. The meter connects energized power lines to your home. Any unauthorized person who attempts to break the meter seal and remove the meter takes great risk in personal safety and also violates the law. Unauthorized removal of a SREC meter will result in a tampering charge. You will also then need an electrical inspection done to avoid disconnection of your service. When a meter has been pulled we receive a signal through our "Blink" monitoring system that there is no power to the meter. This requires a field visit to investigate why there was a "blink" on the meter and you could be charged a trip fee. So if your meter requires service or disconnection for any reason, please call our office for free assistance.

Fight the Winter Chills

Another cold winter is predicted for much of the country this year. Frigid temperatures can cause heating systems to work over time, and since heating and cooling can make up nearly half of your electric bill, you may experience sticker shock when you open that bill. Instead of waiting until after a potentially high bill is in your mailbox, be proactive. These simple steps can help you manage your use. Wrap exposed pipes and water heaters that are in unconditioned spaces, make sure to change your air filter once a month, keep drapes closed at night and keep those that don't get direct sunlight closed during the day too, caulk or weather strip around doors and windows. When extreme cold temperatures hit, our heaters work overtime. For example, even if you set your thermostat to 68 degrees in the winter, when it is 20 degrees outside, your system has to work hard to make up that 48 degree difference. Your heater works harder and cycles on and off more often, making your use much higher. That means your bill will be much higher.

Energy Assistance

Times are hard and members may experience higher than usual electricity bills as winter nears. Falling behind on electric bill payments can certainly happen to anyone occasionally. Here at the Cooperative, we want you to know that there are resources and actions available to help you deal with your electric bills. First and foremost, contact your Cooperative as soon as possible if you can not pay your bill on time. You may be eligible for a payment arrangement. Your household may also be eligible for the Home Energy Assistance Program, based on household income and size. To apply for HEAP contact your county's Department of Social Services. The program helps prevent the disconnection of electric service, energy crisis and long-term energy cost burdens for eligible families.

Schuyler County: 607-535-8303

Cattaraugus County: 716-373-8065

Chautauqua County: 716-753-4385

Are You Interested In Community Solar?

What is Community Solar?

292101

Community Solar is a different model for solar energy. Instead of putting solar on your own home (which requires home ownership, the right sunny location, and a fairly large upfront investment), Community Solar lets members come together to build one larger solar array. Locations are chosen that would be a good fit for solar.

In communities across the United States, there is a rising interest in community solar programs as a means to increase participation in solar energy for people who may have physical, financial, or other limitations to installing solar on their own property. A community solar project would be a solar array developed and owned by an organization like Steuben Rural Electric Cooperative. Members could then buy panels, or shares of the project. The member's share of the electricity generated by the project is credited to their electricity bill, as if the solar system were located at their home or business.

Costs for the project would be covered by participating members through their per-unit subscription payments. There would be no cost to the members who don't participate. That way, those members who are interested in solar energy can participate, and those who don't are not affected.

Steuben Rural Electric Cooperative continues to explore opportunities which bring added benefits and services to our membership. If you would be interested in a Community Solar project, it is important that you complete and submit this survey by January 31st, 2016.

COMMUNITY SOLAR SURVEY

Do you support the use of renewable energy for providing a portion of our electricity even if there is an additional cost?

Yes____ No____

Are you interested in knowing more about a community solar project?

Yes____ No____

Would you be interested in purchasing a panel in a community solar project?

Yes____ No____

Do you want your cooperative to continue to evaluate community solar project options to define specific costs and benefits?

Yes____ No____

Name: _____

Street Address: _____

City/State/Zip code: _____

In Person: You can drop off the survey in person to the Bath or Cherry Creek Office

LED Light Bulbs

LED stands for Light Emitting Diode. It is a product that is assembled into a lamp for use in lighting fixtures. What makes LED bulbs better? That's easy. LEDs use less energy, last longer and are more durable than traditional bulbs. Many of today's LED bulbs are between six to seven times more energy efficient than regular bulbs. That's because regular bulbs release most of their energy as heat, while LEDs release barely any heat at all. Since LED bulbs are made without filament (the little wire in the middle of a regular bulb) and don't have moving parts, LED bulbs don't break as often. SREC is now offering a member only \$1 discount on a line of LED light bulbs that can reduce your energy consumption. Stop by the office and purchase some today!

Recycle Your Tree

When you're ready to bring the holiday season to a close, consider recycling your live Christmas tree instead of tossing it in the trash. Trees of course are biodegradable, so there are lots of ways to reuse them once you strip off the ornaments, electric lights and candy canes. Drop or chop. Haul your tree to a recycling center which will run it through a chipper to turn it into mulch. Feed the fish. Ask for permission to sink your tree in a nearby pond, where it will serve as refuge and a feeding area for fish. Call the birds. Drag your tree out to your yard and re-decorate it with balls of birdseed. Then enjoy bird watching as all kinds of birds fly into the tree to seek shelter and feast on food. But don't leave the tree there forever, once its branches get brittle, it's time to chip it into mulch.

Be Prepared for Winter

Steuben Rural Electric works hard to prevent power outages, but winter storms are unavoidable, and snow, wind and ice may interrupt electricity to your home. If the lights go out this winter, take action. Check fuses, circuit breakers and your neighbors. Report outages to SREC; line crews will be available. Keep away from power lines, and trees and branches near power lines. They could be energized and dangerous, even if the power is out. Make sure you report these hazards to SREC. Our crews respond to hazards, substations and major distribution lines, first, followed by individual service lines. Our hope is that the weather will spare us and we won't have any outages this winter. If we do, however, we will restore service as quickly and safely as possible.

Beware of Phantom Loads in Your Home

You may turn off the TV, hang up the cordless phone, let your computer go to "sleep" and power down your DVD player, but all of these appliances—and many others—continue to draw electricity, costing you energy dollars. Energy use is multiplied in any appliance that has a lit display clock, memory chip, or remote control. These include TVs, DVD and CD players, cable and satellite boxes, cordless phones, microwaves and much more. According to the Department of Energy, 40 percent of all electricity used to power home appliances

is consumed when the appliances are turned off. It's also estimated that these energy "vampires" use 5 percent of our total electricity and cost U.S. consumers more than \$3 billion annually, according to the Alliance to Save Energy. So what can you do to save money? Look for the Energy Star label on all appliances that you purchase. Purchase appliances—such as computers and monitors—that will go into sleep mode when not in use. Anytime you purchase an appliance (such as a microwave) with a continually lighted display and/or clock, you will pay for the constant

on feature. If you can live without these features, your energy costs will decrease. Turning the appliance "off" isn't the answer. You must cut off its source of electricity. The problem is that it's not often practical to unplug each appliance from the wall outlet when it's not being used. The solution is to plug your phantoms into a power strip with a built-in on/off switch. That way a simple switch cuts the power. Although you will never be able to eliminate your homes entire phantom load, you can pull together some of these tricks to make a difference on your energy bill.

Use Your Space Heater Safely

Many people turn to space heaters as a convenient source of warmth in the winter months. However, space heaters can be dangerous if not used properly. The Consumer Product Safety Commission estimates that more than 25,000 residential fires every year are associated with space heaters. More than 300 people die in these fires. Space heater hazards stem not just from fires caused by contact with or close proximity to heating elements. They also include fires started by flamma-

ble fuels used in the heaters; defective wiring in the appliance; and carbon monoxide poisoning caused by improper venting or an incomplete combustion of fuels. Here are some tips for using your electric space heater safely: Keep the heater at least 3 feet from flammable items, select a space heater with a guard around the heating element, buy a heater that can handle the area that you want to heat, read and follow the manufacturer's operating instructions, keep children and pets

away from space heaters, never leave a space heater unattended, never go to sleep with a space heater on, keep heaters away from water to prevent electrocution, do not use an extension cord with a space heater, do not use the heater to dry clothes and be sure the heater's plug fits snugly in an outlet. For additional safety tips on using space heaters, visit the CPSC's website at www.cpsc.gov.

Refunds of Capital Credits to Long Term Members

883402

Uniform Terms and Conditions

1. The Board of Directors will determine a budget for number of significant membership years for refunds.
2. Interested members will be solicited each year in the December issue of The Energizer with a deadline of March 31.
3. Refunds will be paid to natural persons who have been a member of the Cooperative for 50 years, based on application date and continue until the budget is reached.
4. Refunds will not be made to members who are not up to date on their electric bill.
5. All members receiving refunds under this Bylaw section will agree to receive the capital credits discounted based on constant annual payments over the time period of the current effective cycle at the weighted interest rate on the Cooperative's long term debt. The current effective cycle equals the total patronage capital divided by the sum of the budgeted regular retirements, undiscounted special retirements and forfeitures rounded to the nearest year.
6. Members indicating an interest but not receiving a refund will be carried over to the following year's refund list.
7. All members receiving a refund must be an active member at the time checks are issued.
8. Each member is eligible for only one refund in this category.

Refunds of Capital Credits to Long Term Members Application

Member Name: _____ Account Number (s): _____

Phone Number: _____ Social Security Number: _____

Service Address: _____

Mail To: Steuben REC
Refund Long Term Member
9 Wilson Avenue

ACRE Co-op Owners for Political Action

The ACRE Co-op Owners for Political Action program is an exciting new opportunity for residential consumer owners to strengthen their voice in the political process. ACRE is funded by contributions from employees, directors and membership from across the United States. We must maintain a voice on Capitol Hill in order to help shape future laws in favor of Cooperative principles. For over 30 years, the Action Committee for Rural Electrification® (ACRE®) has been working to support candidates for the U.S. Senate and House of Representatives who understand and support electric Cooperatives and their consumer-owners. Now through the special new program, ACRE Co-op Owners for Political Action, you as a consumer-owner, have the ability to strengthen this support and join the over 25,000 members of ACRE. We hope that you will consider this program. Together we will continue to fight for a viable environment for electric Cooperatives and the quality of life of the people and communities Cooperatives serve. It is easy to participate in ACRE through the ACRE Co-op Owners for Political Action program. You may contribute through an addition to your monthly electric bill by completing the authorization form below.

Please add the following amount to my electric bill:

_____ Regular ACRE Member: \$2.08 per month (\$25.00 per year)

_____ Century Club Member: \$8.03 per month (\$100 per year)

_____ President's Club Member: \$41.60 per month (\$500 per year)

_____ Other \$ _____

I affirm that my contribution has been made with Non-corporate funds:

Name: _____

Address: _____

Account #: _____ Signature: _____

*Federal Election Law requires the following information for contributions equal to or exceeding \$200:

Employer: _____ Occupation: _____

Contributions to ACRE/ACRE Co-op Owners for Political Action are strictly voluntary. Contributions to federal and state Political Action are strictly voluntary. Contributions to federal and state Political Action Committees are not deductible for tax purposes. Consumer owners have the right to refuse to contribute without reprisal. The contribution guidelines are suggestions only. You may contribute more or less than the suggested amount. Contributions may be stopped at any time upon notification to the cooperative.

Niagara Hydro Plus Program

Steuben REC is offering the *Niagara Hydro Plus Program* as part of our ongoing commitment to making clean and renewable energy more accessible. You have an exciting option to choose to support 100% renewable energy directly through your Steuben REC monthly bill.

The majority of the power distributed by Steuben REC comes from the Niagara Project, which is a source of clean renewable electricity. When the Cooperative has to purchase incremental power from the New York Power Authority, then the power mix we must purchase is “conventional generation.” Conventional generation consists largely of nonrenewable sources including fossil fuels, which add greenhouse gas emissions and other pollutants to the atmosphere.

We know that you care about the environment and about saving money. When it comes to saving energy and money, your first line of action will always be to reduce your electricity use. Using energy wisely is a clear mandate of our times. By choosing also to support renewable generation—to offset the conventional electricity of our incremental power—you can make a positive difference with a small investment.

To offset conventional power bought from the grid, Steuben REC purchases an equivalent number of Renewable Energy Certificates from the SREC Generating Company, Inc. Since it is impossible to track actual electrons once they enter the electric grid, Renewable Energy Certificates are created at the time of electrical generation for each megawatt hour of power and represent the renewable attributes of clean power. In this way, SREC Generating Company, Inc. can sell the environmentally friendly attributes of their power generation and Steuben REC, as a purchaser, can offset the dirty attributes of the conventional power that it must buy at peak hours.

Steuben REC’s Niagara Hydro-Plus is an entirely voluntary choice you can make, an easy and affordable way for you to support renewable energy directly through your electric bill. The Niagara Hydro-Plus Program supports the growth of environmentally responsible energy production. If you decide to sign up, your electric service does not change. You can change your mind and cancel your enrollment at any time without a penalty or termination fee. The Niagara Hydro Plus Program allows you to purchase Renewable Energy Credits on a monthly basis based on your total monthly kWh usage. This enables our members to purchase only the Renewable Energy Credits needed to offset their individual portion of the “conventional generation” power supply (incremental power). **The cost will be only \$.0010 per kWh of use. (A member who uses 1,000 kWh per month would pay just \$1.00.)** The charge will be added as a separate line item on your monthly Steuben REC bill.

Demonstrate your strong commitment to renewable energy by signing up for the Niagara Hydro-Plus Program. We look forward to working with you to help reduce pollution, support our local economy and give the gift of cleaner air and water to future generations.

To join the Niagara Hydro Plus Program please complete the attached form below and return with your billing payment or mail to:

Steuben REC, Member Service Department, 9 Wilson Avenue, Bath, NY 14810
